CONFORT

PM-49
microperforated

PM-49

microperforated

PM-49 is a **new extruded aluminium slat** with an intermediate profile **microperforated**, that considerably **improves ventilation** and **entry of natural light**.

You can adjust the **intensity of outdoor lighting** and **control your privacy**.

Offers **high security** against possible intrusion, and a **confort**, thanks its dimensions that **enable optimisation** of the size of the **box, axle and motor**.

Ventilation

The **2 mm diameter microperforations** made in the intermediate profile enables natural and continuous ventilation of rooms, reaching **8.05% of free air** ventilation in relation to the area of coverage of the blind.

Insect proof

The microperforations act as an effective **barrier to the entry of insects**.

Privacy

Enables a relatively unrestricted view toward the outside while preserving **privacy for the interior** of the room. At the same time it **reduces direct entry of light**, acting as protection against solar radiation.

Security

Offers high security against possible intrusion owing to the installation of **self-blocking tapes** that have **high strength blocking properties**.

Technical characteristics

NOMINAL THICKNESS

9,27 mm

AREA OF COVERING (CLOSED)

49 mm

AREA OF COVERING (OPENED)

68,30 mm

FREE VENTILATION AREA (OPENED)

8,05 %

NUMBER SLATS BY METER

20,40 units

MAXIMUM WIDTH TESTED

3.000 mm

WEIGHT

8,60 kg/m²

PACKAGING UNIT STANDARD

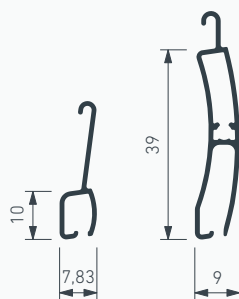

60 m/l

PRODUCTION LENGTHS

5, 80 m | 6,00 m | 6,50 m

MINIMUM ROLLING DIAMETER

50 mm
